## DETAILED ACTION

### ***Conclusion***

This application is in condition for allowance except for the following formal matters:

### ***Drawings***

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

2. The disclosure is objected to because of the following informalities:

Page 10, lines 27-28 & line 32, state "The WANs are connected by router devices 70-72 to each other via network connections". Neither router device 71 nor router device 72 can be found in Figure 6.

Appropriate correction is required.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

3. Claims 1-21 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The Claims 1 – 21 are allowable over the prior art of record since the cited references taken individually or in combination fail to teach or fairly suggest the steps of *“making a concatenated or second data packet, the concatenated or second data packet including: a second header part containing second data packet specific information including a second destination address, a second body part including: a data part including the first body parts of said first data packets and a content information part including information determining the position of each of the first body parts in the data part, the number of first body parts contained in the concatenated or second data packet and said original first destination addresses of the first body parts”* as recited in claims 1, 14 and 17. It is noted that the closest prior art, Chuah et al. (US Patent No. 6,704,311) discloses an Internet Protocol (IP)-based network incorporates a number of packet endpoints and an application level switching server, which extracts each application session (or packets associated therewith) and repackages, or switches, them into other multiplexed sessions. However, the repackaged data format in Chuah et al. does not meet all limitations as cited in the claims 1, 14 and 17.
